Subject: OpenVZ/CentOS package installation conflict

Hi

When I try to install on CentOS 4.3 (Final) the package "up2date" on a VPS from the HN (with the command vzyum 101 install up2date), the installation failed with the following error :

Transaction Check Error : file /sbin/nash from install of mkinitrd-4.2.1.6-1 conflicts with file from package dummy-centos-4.1.0-3.swsoft.

(The package mkinitrd is an install dependancy of up2date. I actually evaluate OpenVPZ with dev kernel 2.6.16-026test015.2)

Do you know if it's dangerous to force the installation regarding the VPS or if there is an alternative of up2date for a VPS which uses different packages than the HN ?

Regards.

Bernard

use "yum" instead of "up2date" and you'll be fine.
