I don't really get what you mean...

To add IP address to the VE you should give the following command:

```
vzctl set 201 --ipadd 10.0.0.12 --save
```

201 - VE id  
10.0.0.12 - ip address for this VE.

HTH.

As I think, it's means "to add ip" from inside vps. Certainly you can add ip aliases, but, without tuning the table of routing on ve0 it won't work.
