Hello all,

I am getting issue in my node, Actually my one VPS is in very high load and due to this my main node is in high load. I need a script by which I can control this VPS. like if particular VPS load will be more than 5 then it automatically restart. Can you please help me ?

Thanks in advance

We are seeing the same problem. What kernel are you using?

2.6.18-194.3.1.el5.028stab069.6 here..

Hello

My kernel is 2.6.18-194.3.1.el5.028stab069.6. OS is CentOS release 5.5 (Final) and I am using SolusVM for virtulisation. Its core version is AZEC-5.52.xpv.xhvm.cbs.vz.

I want a script which can suspend those VPS whose load is more that 3-5 from last 5 minute

Thanks

Please copy/paste your:

1. cat /proc/user_beancounters

In VE

2. cat /etc/sysconfig/vz-scripts/<veid>.conf

3. copy/paste top, iostat usage on your HN, also, you may copypaste sar statistics
