Hello,

There is a node to where when rebooting the network service, venet0 does not boot correctly...
any help/advise would be great!

```
[root@vm2 network-scripts]# service network restart
Shutting down interface eth0:                    [  OK  ]
Shutting down interface venet0:                  [  OK  ]
Shutting down loopback interface:                [  OK  ]
Disabling IPv4 packet forwarding:  net.ipv4.ip_forward = 0
                                   [  OK  ]
Bringing up loopback interface:                  [  OK  ]
Bringing up interface eth0:                      [  OK  ]
Bringing up interface venet0:  Usage: grep [OPTION]... PATTERN [FILE]...
Try `grep --help' for more information.
Usage: grep [OPTION]... PATTERN [FILE]...
Try `grep --help' for more information.
Missing config file ifcfg-ifcfg-venet0.
                                   [  OK  ]
[root@vm2 network-scripts]#
```

Hi,

I think that you should pay attention at the last message:
Quote:
Missing config file ifcfg-ifcfg-venet0.

I have similar file on my system and it belongs to vzctl-3.0.24-1.

```
# rpm -qf /etc/sysconfig/network-scripts/ifcfg-venet0
vzctl-3.0.24-1
```

Why is it called as "ifcfg-ifcfg-venet0" on your system?

I'm aware of the error message, and I'm not sure why it displayed ifcfg-ifcfg-venet0.

I reinstalled all of vz's services and it worked fine, so its resolved.
