```
[root@test2 /]# yum
```

There was a problem importing one of the Python modules required to run yum. The error leading to this problem was:

```
No module named yum
```

Please install a package which provides this module, or verify that the module is installed correctly.

It's possible that the above module doesn't match the current version of Python, which is:

```
2.4.3 (#1, Mar 5 2011, 21:25:56)
```

```
[GCC 4.1.2 20080704 (Red Hat 4.1.2-50)]
```
