Hello,

some processes on my node use a lot of CPU. How do I find out which VE runs which process?  
In top or with ps aux I only see this:

```
28910 33      15  0 35948 8608 3288 S 89.5  0.1  0:21.07 /usr/bin/php5-cgi
```

So the process root is /usr/bin/php5-cgi, but I still don't know which VE executes it. The load of all VEs is normal, so I also can't find it with veid,laverage.

On HN node you can use vzpid tool

for example if 8480 is a pid

```
#vzpid 8480
```

Pid	VEID	Name
-----	------	------

8480	210	httpd
------	-----	-------

or use htop with ctid feature:

htop -> setup (f2) -> columns -> choose ctid on right side -> quit (f10)

you can sort via ctid as well

Bye,

Thorsten
