I'm trying to find a feature / performance comparison between openvz, xen, virtuozzo.

I'm interested in comparing features, performance and compatibility.

I do have a virtuozzo node now at the moment. However, I'm thinking of going openvz.

Would someone please kindly clarify these below:

- 1. Any available web-gui for openvz (paid or commercial)? Or at least ay plans for openvz to have one in the future? I'm curious why one does not exist yet.
- 2. Any obvious differences in comparison to virtuozzo aside the above missing web panel for admin/client?

Examples: overselling? burstable memory?

3. OpenVZ stable like virtuozzo?

Thanks in advance.

- 1. there are some amateur GUIs for OpenVZ (search this forum). Didn't see any commercial one yet. Why they don't exist because it takes quite some time and brains to make a proper one.
- 2. http://openvz.org/documentation/tech/virtuozzo among the most noticeable.
- 3. yes, kernel -stab series share mostly the same code as Virtuozzo's -stab.
