I'm trying to find a feature / performance comparison between openvz, xen, virtuoizzo.

I'm interested in comparing features, performance and compatibility.

I do have a virtuoizzo node now at the moment. However, I'm thinking of going openvz.

Would someone please kindly clarify these below:

1. Any available web-gui for openvz (paid or commercial)? Or at least ay plans for openvz to have one in the future? I'm curious why one does not exist yet.
2. Any obvious differences in comparison to virtuoizzo aside the above missing web panel for admin/client?

Examples:

overselling?

burstable memory?

3. OpenVZ stable like virtuoizzo?

Thanks in advance.

1. there are some amateur GUIs for OpenVZ (search this forum). Didn't see any commercial one yet. Why they don't exist - because it takes quite some time and brains to make a proper one.
 2. <http://openvz.org/documentation/tech/virtuoizzo> among the most noticeable.
 3. yes, kernel -stab series share mostly the same code as Virtuoizzo's -stab.
