Have Centos 5.5 64 bit installed

```
[root@server098weblogic ~]# yum install ovzkernel.x86_64 -smp
Loaded plugins: fastestmirror
usage: yum [options] COMMAND
```

List of Commands:

```
check-update  Check for available package updates
clean         Remove cached data
deplist       List a package's dependencies
downgrade     downgrade a package
erase         Remove a package or packages from your system
groupinfo     Display details about a package group
groupinstall  Install the packages in a group on your system
grouplist     List available package groups
groupremove   Remove the packages in a group from your system
help          Display a helpful usage message
info          Display details about a package or group of packages
install       Install a package or packages on your system
list          List a package or groups of packages
localinstall  Install a local RPM
makecache     Generate the metadata cache
provides      Find what package provides the given value
reinstall     reinstall a package
repolist      Display the configured software repositories
resolvedep    Determine which package provides the given dependency
search        Search package details for the given string
shell         Run an interactive yum shell
update        Update a package or packages on your system
upgrade       Update packages taking obsoletes into account
```

Command line error: no such option: -s

```
[root@server098weblogic ~]# yum install ovzkernel.x86_64[-smp]
Loaded plugins: fastestmirror
Loading mirror speeds from cached hostfile
* addons: yum.singlehop.com
* base: mirrors.adams.net
* extras: mirrors.adams.net
```

* updates: mirrors.cmich.edu
Setting up Install Process
No package ovzkernel.x86_64[-smp] available.
Nothing to do

[root@server098weblogic ~]# yum install ovzkernel[-smp]
Loaded plugins: fastestmirror
Loading mirror speeds from cached hostfile
* addons: yum.singlehop.com
* base: mirrors.adams.net
* extras: mirrors.adams.net
* updates: mirrors.cmich.edu
Setting up Install Process
No package ovzkernel[-smp] available.
Nothing to do

yum install ovzkernel.x86_64

You have a very steep learning curve ahead of you, as it seems...

Have you added the OpenVZ repository to your yum configuration?
