I've followed the guide for Fedora Core 4 and got upto starting OpenVZ (before doing templates etc)

i'm issuing the following but it just tells me it failed why?

```
#/etc/init.d/vz start  
Starting OpenVZ:          [FAILED]
```

i'm a bit of a newbie to this and Linux

Can you post  
Quote:# uname -a  
output here, please.

You are working on FC kernel, not OpenVZ kernel!  
If you've installed OpenVZ from RPMs  
choose OpenVZ kernel during boot procedure, please.

I suppose you are using GRUB, so just add appropriate default string to /boot/grub/grub.conf.

Something like that:

[QUOTE]default=0[QUOTE]

If OpenVZ kernel is first in the list of kernels.
