How do I uninstall OpenVZ from a CentOS box I have it installed on?

```
rpm -e ovzkernel vzctl vzquota
```

[View Forum Message](#) <> [Reply to Message](#)

```
[root@ds00209 ~]# rpm -e ovzkernel vzctl vzquota vzpkg vztmpl-fedora-core-4 vztmpl-centos-4  
vztmpl-fedora-core-3  
[root@ds00209 ~]# rm -rf /vz/
```

I had to do that to solve dependancies... should anything else remain?

Do something like
rpm -qa | grep vz
These packages are most probably owned by OpenVZ.

I guess, that
vzctl-lib, vzyum, vzrpm43, vzrpm44 packages
are not mentioned in the posts above, but
should be removed.

Correct, I had to enter

```
rpm -e vzyum vzrpm44-python vzrpm44 vzrpm43-python vzctl-lib vzrpm43
```

to remove all further packages.

```
rpm -e vzctl-lib-3.0.11-1 vzrpm43-4.3.3-7_nonptl.6 vzquota-3.0.8-1 vzctl-3.0.11-1 vzyum-2.4.0-11  
vzrpm43-python-4.3.3-7_nonptl.6 vztmpl-centos-4-2.0-2 vzpkg-2.7.0-18
```

That will uninstall everything from vz on centos

Hello
i deleted vz folder

and run

```
[root@localhost /]# rpm -qa | grep vz  
ovzkernel-smp-2.6.9-023stab040.1  
vzctl-lib-3.0.14-1  
[root@localhost /]# rpm -e vzctl-lib-3.0.14-1 ovzkernel-smp-2.6.9-023stab040.1
```

and now i run again
[root@localhost /]# rpm -qa | grep vz
[root@localhost /]#

and now i want install hypervm(openvz) again
that ask of me :
Content-type: text/html
X-Powered-By: PHP/4.3.9

hyperVM is installed do you wish to continue?(No/Yes):

and i select yes
but take error only

groupadd: group lxlabs exists
useradd: user lxlabs exists

isn't hypervm a commercially supported software product?

based on the error, yum is running or yum thinks it is. killall yum.

Rick
