(I cannot publish my email in bugzilla)

Ubuntu 10.04 templates lack of bodhi.zazen's patch for upstart. It's a simple text file saved as /vz/private/777/etc/init/openvz.conf and with the following content. Without this, on container upgrade networking is lost:

# OpenVZ - Fix init sequence to have OpenVZ working with upstart

description "Fix OpenVZ"

start on startup

task

pre-start script

mount -t devpts devpts /dev/pts

mount -t tmpfs varrun /var/run

mount -t tmpfs varlock /var/lock

mkdir -p /var/run/network

if [ ! -e /etc/mtab ]; then

cat /proc/mounts > /etc/mtab

fi

touch /var/run/utmp

chmod 664 /var/run/utmp

chown root.utmp /var/run/utmp

if [ "\$(find /etc/network/ -name upstart -type f)" ]; then

chmod -x /etc/network/\*/upstart || true

fi

end script

script

start networking

initctl emit filesystem --no-wait

initctl emit local-filesystems --no-wait

initctl emit virtual-filesystems --no-wait

init 2

end script

Also is necessary to put upstart, mountall and ifupdown on hold:

echo "mountall hold" | dpkg --set-selections

echo "upstart hold" | dpkg --set-selections

echo "ifupdown hold" | dpkg --set-selections
