wich are the perfect parameters for a VPS.

i mean, i know it depend of traffic and use.

But for example for a 2Gb VPS with cpanel and apache2, and the traffic is high.

```
kmemsize      19945332  28827293  28745400  29580328
tcpsndbuf     6577344   8446272   9940640   9940640 1144377358
tcprcvbuf     677120   1977152   5440640   6406720   42308
```

im getting a lot of failcnt there.
