I have two OpenVZ VPS, and i want all have the same files in /var/www.
On first i've added nfs server:

```
root@vps12:/mnt# showmount -e xx.xx.xx.vps1ip
Export list for xx.xx.xx.vps1ip:
/var/www/ xx.xx.xx.vps2ip
```

And when i try to mount on vps2:

```
root@vps12:/mnt# mount -o vers=3,tcp,nolock,intr xx.xx.xx.vps1ip:/var/www/ /var/www/mount
mount.nfs: No such device
```

```
root@vps12:~# ls -lah /var/www/mount/
total 8.0K
drwxr-xr-x 2 root root 4.0K 2010-11-30 11:39 .
drwxr-xr-x 4 root root 4.0K 2010-11-30 11:39 ..
```

What is wrong?
