
Subject: ***SOLVED*** VPS Tamplate: gentoo-20060317-i686-stage3

Posted by [stefan](#) on Tue, 08 Aug 2006 08:46:29 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi, we installed the gentoo-20060317-i686-stage3 from <http://openvz.org/download/template/cache>. It runs, but:

vzctl enter -> enter failed

ssh is also not posible, after giving the passwort nothing goes on.

the other installed VPS (debian, opensuse) dont have the this problems.

Has anybody an idea to solve this?

Are there other VPSs (with different tamplates), that works?

What kernel do you use?

If you've compiled it yourself provide config file, please.

other VPSs that works:

debian-3.1-i386-minimal.tar.gz

fedora-core-3-i386-default.tar.gz

opensuse-10-i386-default.tar.gz

Kernel: 2.6.16-026test015

Can you strace vzctl enter command, please?

Here is a small article how to do it:

http://wiki.openvz.org/Stracing_a_program

And post straces here!

Thanks.

P.S. Also, if you can provide temporary access to your node it would be much quicker to resolve your problem. So, if you have such possibility send login information through PM.

Sorry, but this isn't the whole strace.
While vzctl works, it creates child processes.
These processes aren't traced in your case.

Read http://wiki.openvz.org/Stracing_a_program, please,
to create appropriate strace.

Thanks!

There is BAD /dev/ptyp* entries inside VE in question. Please, copy them from working VE:
cp /vz/private/100/dev/ptyp* /vz/private/200/dev/
100 - working VE
200 - VE, where enter fails.

[View Forum Message](#) <> [Reply to Message](#)

That does not work, sorry
Maybe because the other VEs dont use udev.
could this be a way to solve the problem?
http://wiki.openvz.org/Gentoo_template_creation#Set_up_udev
or must we create a new template?

As far as I understand you are using precreated template
(gentoo-20060317-i686-stage3.tar.gz).
I've tried them and it works for me, so there is no need
now to recreate template.
We must discover first what's the reason, why it doesn' work.
Ok. Please do the following:
200 - VEID of VE, where enter fails.

```
ls -l /vz/private/200/dev/ptyp0  
ls -l /vz/private/200/dev/ttyp0  
ls -l /vz/private/200/dev/ptmx
```

```
ls -l /vz/private/200/lib/udev/devices/ptyp0  
ls -l /vz/private/200/lib/udev/devices/ttyp0  
ls -l /vz/private/200/lib/udev/devices/ptmx
```

```
ls -l /dev/ptyp0  
ls -l /dev/ttyp0  
ls -l /dev/ptmx
```

100 - VEID of some other VE, where enter passes:
ls -l /vz/private/100/dev/ptyp0
ls -l /vz/private/100/dev/ttyp0
ls -l /vz/private/100/dev/ptmx

Post the results here, please.
Thanks.

```
ls -l /vz/private/200/dev/ptyp0
crw-rw-rw- 1 root tty 2, 0 Mar 18 17:24 /vz/private/200/dev/ptyp0
```

```
ls -l /vz/private/200/dev/ttyp0
crw-rw-rw- 1 root tty 3, 0 Mar 18 17:24 /vz/private/200/dev/ttyp0
```

```
ls -l /vz/private/200/dev/ptmx
crw-rw-rw- 1 root tty 5, 2 Mar 18 17:24 /vz/private/200/dev/ptmx
```

```
ls -l /vz/private/200/lib/udev/devices/ptyp0
ls: -: No such file or directory
ls: l: No such file or directory
/vz/private/200/lib/udev/devices/ptyp0
```

```
ls -l /vz/private/200/lib/udev/devices/ttyp0
ls: -: No such file or directory
ls: l: No such file or directory
/vz/private/200/lib/udev/devices/ttyp0
```

```
ls -l /vz/private/200/lib/udev/devices/ptmx
ls: -: No such file or directory
ls: l: No such file or directory
/vz/private/200/lib/udev/devices/ptmx
```

```
ls -l /dev/ptyp0
ls: /dev/ptyp0: No such file or directory
```

```
ls -l /dev/ttyp0
ls: /dev/ttyp0: No such file or directory
```

```
ls -l /dev/ptmx
crw-rw-rw- 1 root tty 5, 2 Aug 9 08:40 /dev/ptmx
```

```
ls -l /vz/private/400/dev/ptyp0
crw-rw-rw- 1 root tty 2, 0 Dec 17 2005 /vz/private/400/dev/ptyp0
```

```
ls -l /vz/private/400/dev/ttyp0
crw-rw-rw- 1 root tty 3, 0 Dec 17 2005 /vz/private/400/dev/ttyp0
```

```
ls -l /vz/private/400/dev/ptmx
```

crw-rw-rw- 1 root tty 5, 2 Dec 29 2005 /vz/private/400/dev/ptmx

VE 400 is a precreated template opensuse (opensuse-10-i386-default.tar.gz)

Thank You

The problem is that you've compiled kernel with CONFIG_LEGACY_PTYS option off. Please turn it on (CONFIG_LEGACY_PTYS=y) and everything will be OK.

Good luck!
