Starting to set up CTO and have this set of lines in wiki:

```
Quote:[host-node]# ifconfig veth101.0 0
[host-node]# echo 1 > /proc/sys/net/ipv4/conf/veth101.0/forwarding
[host-node]# echo 1 > /proc/sys/net/ipv4/conf/veth101.0/proxy_arp
[host-node]# echo 1 > /proc/sys/net/ipv4/conf/eth0/forwarding
[host-node]# echo 1 > /proc/sys/net/ipv4/conf/eth0/proxy_arp
```

I want to use a physical nic which is eth5. I assume that the eth0 in lines 4 and 5 should be eth5 in my case.

Although if you are planning on bridging the veth interfaces then no need for proxy arp in my experience.
