Subject: How do I get rid of ip connection tracking completely?
Posted by xxedgexx on Fri, 11 Feb 2011 19:03:18 GMT

We're having issues with some heavily loaded machines with a lot of remote connections. Basically the connection tracking table is overflowing. We really don't need connection tracking at all since we're not using NAT. How do I disable this completely from the host?

We're using kernel

2.6.18-164.15.1.el5.028stab068.9
