I want to create a brand new node and have a few questions:

OS Templates:

<http://wiki.openvz.org/Download/template/precreated>

1. Is the "suse" in the first section under "List of templates available at download:template/precreated/" and its mirrors: " a commercial Suse or is it OpenSuse? Does this require a paid license?

2. OpenVZ Web Panel, good or bad? What about SoluvVM and VDS Manager? Which is the best option?

I want the most features for both admin and vps clients.

3. Is Windows 2008 possible on a vps container?

4. Any advice on new vps NODE setup? Security? Optimization?

Any warnings? Such as, what "contributed" os templates to stay away from? I pretty much would like to offer all of them to my clients including:

Centos

Debian

Fedora

Gentoo

OpenSuse

Slackware

SLES

Ubuntu

I'm guessing it doesn't matter if the NODE itself is 64 bit, the containers can be either 32 or 64?

Doesn't OS-based or container virtualization require the same kernel throughout? If I read the docs correctly, Windows won't fit.
