I agree with Rafael. I think the scheduler should provide the solution
and it can be done via modifications to the cpu cgroup subsystem.
Yes, it only has the shares and rt-related files *right now*. However,
Kame replied earlier with a link to some patches for extending it
that introduce files with similar (granted: not the same) semantics:

 http://linux.derkeiler.com/Mailing-Lists/Kernel/2010-10/msg0 4335.html

I think you could build on that and help push those patches towards
mainline along with your enhancements for reducing wakeups rather
than modify the freezer cgroup subsystem.

Cheers,
 -Matt Helsley

I will give CFS bandwidth control patches a try. See if I can be any
help. Thanks.

Jacob
