I installed virtualmin on my VPS and created a new virtualhost. I googled how to change the time and found

```
rm /etc/localtime
```

```
ln -s /usr/share/zoneinfo/US/Eastern /etc/localtime
```

Tried and failed

Strangely when I view any timezone file in the zoneinfo directory and the /etc/localtime file all I see is TZif2 is this okay ?

Is there any other way to change my timezone ?

Hi,

seems the zonefile(s) are missing ... reinstall the tzdata package

btw, can you plz post where the ostemplate was downloaded, or it's a selfbuild os template ?

Bye,

Thorsten

why you installed virtualmin? If i am right, it is useful on the HN, not on the container itself. Maybe you wanted webmin?

Hi,

@Tipika : virtualmin is a web hosting control panel, see <http://www.virtualmin.com/>

@vald: ask your provider, why this template has no timezone files (maybe to save space)

```
# install timezone files
$ yum installed tzdata
```

```
#
$ yum update tzdata
```

Bye,
Thorsten

* extras: ftp.osuosl.org
* updates: pubmirrors.reflected.net
addons                | 951 B    00:00
base                  | 2.1 kB   00:00
extras                | 2.1 kB   00:00
updates               | 1.9 kB   00:00
virtualmin            | 951 B    00:00
virtualmin-universal | 951 B    00:00
Setting up Install Process
Package tzdata-2010l-1.el5.i386 already installed and latest version
Nothing to do
```

The tzdata package is already the latest version, that means there is some other problem.
