---

Hello, I am currently running the atkov patch on 2.6.32.11.

I have attempted to install the feoktistov patch to vanilla sources with no success, I have tried 2.6.32, 2.6.32.27 through 2.6.32.32.

In most cases I could not see openvz in the virtualization section in menuconfig. 2.6.32 could not even run menuconfig.

I am on Debian, but the dist supplied kernels do not boot so I have been forced to compile my own.

Can someone document the proper steps for patching with feoktistov under a kernel version newer than 2.6.32.11?

Thanks All!
