Hello.

I have 1 Vps. I have OS - "centos-5-i386-hostinabox576", Disk Space - 100 Gb, Ram's - 2 Gb. On the VPS i have installed Shoutcast for my radio station.

After I write in putty root and password I took this error "-bash: fork: Cannot allocate memory"

The print with the error is here img585.imageshack.us/i/erorrg.png/

How can I solve this problem?
Please help me and Thnx

That container is running out of memory. You can see what limit it's hitting with `cat /proc/user_beancounters`

That limit should be raised.

Regards,

In `/proc/user_beancounters` I saw the limits, I edited but not saved.
But I rebuilt the OS and now work fine ;P

Thnx anyway

/proc/user_beancounters provide info about current limits.
If you want to edit limits you must use

```
vzctl set VEID --limit1 limit1value --limit2 limit2value --save
```

This command will change limits on the fly and store it in /etc/vz/conf/VEID.conf

More info in man vzctl
