Subject: Start/stop VE
Posted by Brain89 on Tue, 15 Mar 2011 10:21:34 GMT

Hello.
I encountered the following problem.
1. Create VE
vzctl create 1002 --ostemplate ubuntu-8.04-x86_64 --config vps_initial
Creating container private area (ubuntu-8.04-x86_64)
Performing postcreate actions
Container private area was created

2. Start it
vzctl start 1002
Starting container ...
Container is mounted
Setting CPU limit: 2
Setting CPU units: 16650
File resolv.conf was modified
Setting quota ugidlimit: 0
Container start in progress...

3. Try to stop
vzctl stop 1002
Stopping container ...
Unable to stop container: operation timed out

And after that I can't stop/destroy/enter the VE...
Could you help me?

P.S.
Linux qwerty 2.6.32-openvz-dzhanibekov.1-r1

I've found out the reason... The template ubuntu-8.04-x86_64 was incorrect. If using another OS for CT everything is going well.

If you ask me, it's still a bug in openvz.

It would be very bad if some user inside the container could make the container "unstoppable".

Regards,
