Hi,all!

After installing the kernel-2.6.18-238.5.1.el5.028stab085.2 I got a few spontaneous reboot.

I can't find more anything unusual in the logs

Maybe it's related with this message:

arcconf: deprecated find_task_by_pid function is used. If it is called by the proprietary ATI video driver it is ok, otherwise please report the case to users@openvz.org

Call Trace:
