Hi \*,

ssh login attempts from my host system to to a centos-5 64 Bit container suddenly take up to 30 secs before the password prompt appears - as to one or two secs before.

Between the short login response time and the long one I worked on kernel parameters on host and vm (shm) to accomodate an Oracle-11 installation, but I can't get back to the "original" state.

I even created an new centos-5 container from a template to test the login response time - same effect: around 30 secs.

Looks like I messed up something on the host.

Any ideas?

Joachim

Host:

```
blade2:/vz/private# pveversion --verbose
pve-manager: 1.7-11 (pve-manager/1.7/5470)

---

have you changed any nameserver settings, like resolv.conf etc ?

Bye,  
Thorsten

---

I changed some kernel parameters of the VM host.  
After a "sysctl -p" they showed up OK on the VM host.  
From then on the ssh login to a VM took "long" - till I rebooted the vm host.
