---

hi there, it's my first post to this ml.

I'm using OpenVZ with 251's VE.  
so I added function to vzctl to set range of veid.

ex.  
vzctl restart all  
vzctl stop 1000-2000  
vzctl set 1000,2000 --nameserver 192.168.0.1 --save  
vzctl destroy 1000,2000,3000-6000

How do I post this patch?

You can attach it to message;) or make it with the help of "git  
format-patch", then send it to this list with the help of "git send-email".

thanks your suggestion. I posted by "git format-patch".  
and full source code is <http://atashi.net/inu/en/software/vzctl.html>
