Hi,

When doing online migration, I get the following error: Error: undump failed: File exists. Full output:

```
# vzmigrate -r no --keep-dst --online -v 10.7.222.2 301
Starting online migration of CT 301 to 10.7.222.2
OpenVZ is running...
   Loading /etc/vz/vz.conf and /etc/vz/conf/301.conf files
   Check IPs on destination node:
Preparing remote node
   Copying config file
301.conf                          100% 1730    1.7KB/s   00:00
Name mail assigned
Saved parameters for CT 301
   Creating remote container root dir
   Creating remote container private dir
   VZ disk quota disabled -- skipping quota migration

Checkpointing completed succesfully
   Copying dumpfile
dump.301                          100%  187MB  37.5MB/s   00:05
   Syncing private (2nd pass)
   VZ disk quota disabled -- skipping quota migration
   Undumping container
Restoring container ...
Starting container ...
Container is mounted
     undump...
Setting CPU units: 11222
Configure veth devices: veth301.0
Adding interface veth301.0 to bridge br-wan on CT0 for CT301
Error: undump failed: File exists
Restoring failed:
```

Error: open_deleted: no suffix
Error: rst_file: -17 308640
Error: rst_files: -17
Error: make_baby: -17
Error: rst_clone_children
Error: make_baby: -17
Error: rst_clone_children
Stopping container ...
Container start failed
Container was stopped
Container is unmounted
Error: Failed to undump container
Resuming...

This error is output from "vzctl restore" command on this line of vzmigrate script:

logexec 2 $SSH root@$host vzctl restore $VEID --undump --dumpfile $VE_DUMPFILE
--skip_arpdetect

Any hints/help is greatly appreciated!

Regards,
divB

/EDIT: I tried around with small and big containers ... very often I get some errors: File exists, no
space left on device, ... Sometimes it helps to reboot the destination hardware node, sometimes it
helps to restart specific services within a container, sometimes certain processes need to be killed
before migration. In fact, it is pure random whether live migration works. It seems to be very error
prone and mostly unuseable in practice. I am the one person who has these problems? There is
very few information on google

I have the same problems and I don't know how i can fix it I will try to reboot destination server
but after hours and try again, but maybe you find some better solution.

Best,

Kamyk

Hi,

I do not know if this works but as far as I remember the error results from resource shortage of kernel objects.

You could try to raise the nr of allowed inotify objects in sysctl.conf:

fs.inotify.max_user_watches=16384

Regards,
divB
