Will that work...?

I do not know what functionality is required from kernel and is it backported to RHEL kernel.

Maybe I should just bite the bullet and try?!

Thanks

It should work, we have forward-ported all the features required by newer distros.

More to say, latest vzctl (since 3.0.25) sets this on a per-CT basis, using the table from /etc/vz/osrelease.conf. If you run vzctl-3.0.25 or later, just add the following line to this file:

```
debian-6.0 2.6.32
```

I will fix it in vzctl-3.0.26.3 soon.

This solved the problem...

Thanks

Stock Debian 6.0 (Squeeze) doesn't require this, it runs libc6 2.11
which doesn't depend on kernel version.
We have several Squeeze containers running happily on RHEL5 OpenVZ
kernel without tweaks (however latest 089.1 stable ovz kernel is highly

recommended since it corrects some serious bugs).

I believe problem arose maybe because Hristo Benev had some testing/unstable packages installed before upgrading to Squeeze.

Indeed, I have unstable enabled in my sources.

Thanks for pointing it out.

Hristo
