Subject: incremental backup on OpenVZ containers ?

Hi,
I am only aware of vzdump as a backup tool for taking backup of OpenVZ container. However, it does not offer incremental backups.
I was wondering if there are any backup tools available that will do an incremental backup of an Openvz container?
Thanks in advance.

I am interested in Incremental backup aswell...
Loving the Ezvzbackup script, which I am using right now.
But a week of backups is already 250GB and this is growing very fast.

Does anyone have a script like that or knows how to adjust the ezvzbackup one to give it that option ?
