Ok, I read the man page for vzctl and I can't seem to find info on how to use the "added VE name support".

Where can I find docs for this? Perhaps I'm overlooking something obvious and if so, I'm sorry.

It is added to vzctl (--name) and vzlist (-n parameter) utilities. VE can be referred by name assigned using vzctl's --name parameter. /etc/vz/names directory contains the name references in format name.conf

examples:

set VE name:

vzctl set <VPSID> --name <NAME> --save

enter VE by name:

vzctl enter <NAME>

list all VEs with name field:

vzlist -a -n

From a brief look - there is no way to unset the name with vzctl, only by deleting the corresponding file in /etc/vz/names.

Hope this helps
