Hello!

I read the documentation but I'm still not sure about how to set container memory.

Could please somebody provide the practical way to do it?

Thanks!

I read the documentation but I'm still not sure about how to set container memory.

Thanks!

To set container memory, please check as :

```
=====
vzctl set 102 --vmguarpages 5130000:5140000 --save

vzctl set 105 --privmpages 2G:3G --save
=====
```

vmguarpages : Guaranteed memory to VE
privmpages : Maximum theoretic memory available to VE (real available
memory vmguarpages, right?)

Thanks
