Hello!

I want to add veth-interfases to the bridge on HN start. There is a simple script for this task -
vznetaddr.

In vz.conf

```
EXTERNAL_SCRIPT="/usr/sbin/vznetaddr"
```

In 101.conf

```
CONFIG_CUSTOMIZED="yes"
```

```
VZHOSTBR="br0"
```

But after daemon restart i found in logs:

```
CT 101 : Warning at /etc/vz/conf/101.conf:22: unknown parameter CONFIG_CUSTOMIZED ("yes"), ignored
```

```
vzctl : CT 101 : Warning at /etc/vz/conf/101.conf:23: unknown parameter VZHOSTBR ("br0"), ignored
```

vzctl version 3.0.27

kernel 2.6.32-042stab013.2

Maybe in newest version some syntax changes? Thanks!
