Subject: openvz and tcpdump

Good evening:

I was wondering if it was possible to allow the guest OS direct access to the ethernet device.
Specically, I want to be able to have multiple instances host OS to run tcpdump in promiscuous
mode against the eth1 interface (example). Is this even possible with openVZ?

matt

Matt,

can you rephrase you question please and provide more details on what you
want to get? Since I couldn't catche the question, sorry :/

Thanks,
Kirill
