Hello.

I have installed the packages:

```
...
vzctl.x86_64      3.0.28.2-1      installed
vzctl-lib.x86_64 3.0.28.2-1      installed
vzquota.x86_64   3.0.12-1        installed
...
```

on my server:

CentOS release 5.6 (Final)

Kernel 2.6.18-238.12.1.el5.028stab091.1 on an x86_64.

I have a some troubles with quotas.

I want to downgrade the vzctl.

I try...

```
[root@server ~]# yum downgrade vzctl.x86_64
```

and see...

```
Loaded plugins: fastestmirror
```

```
Setting up Downgrade Process
```

```
Loading mirror speeds from cached hostfile
```

```
* base: centos.itt-consulting.com
```

```
* extras: centos.itt-consulting.com
```

```
* openvz-kernel-rhel5: lnx.apollo-hw.ro
```

```
* openvz-utils: lnx.apollo-hw.ro
```

```
* updates: centos.itt-consulting.com
```

```
Excluding Packages in global exclude list
```

```
Finished
```

```
Only Upgrade available on package: vzctl-3.0.28.3-1.x86_64
```

```
Nothing to do
```

How can I do downgrade vzctl?

Is it possible?

Manually -- download rpm packages from <http://wiki.openvz.org/Download/vzctl/> and install using
rpm -Uhv --oldpackage
