What is this message about (stderr)

```
[root@vz52 mcs]# vzlist | head
```

```
Invalid value for DEVICES=c:196:255:rw, skipped
```

```
  CTID    NPROC STATUS  IP_ADDR    HOSTNAME
```

```
...
```

You can email me at support at unixservice dot com

Newer vzctl (and vzlist) shows more detailed explanation, including the file name and the line number. Most probably there are some extra characters on that DEVICES line in one of VE config files.
