Subject: VE's on differents wan subnets on 1 NH wan nic is that possible?
Posted by pilpelet on Fri, 05 Aug 2011 11:51:17 GMT

Hi,
Im tring to setup 2 WAN subnets(possibly more later) on 1 NH nic
and asign each VE with IPs from differets subnets
is that even possible?

The senario is that:

NH - 1 WAN nic(has subnet 1 IP and default route)
the route is to a pix firewall(on port wich configures with subnet 1 thru a switch that has all
interfaces from the 2 subnets connected to him without vlans
the pix has the 2 IP wan subnets connected to him to the switch and on the other side connected
to the ISP.

I tried few arp and routing tests but none worked.

Any help would be realy aprociated.

Thanks,
