2011-08-07T18:29:24-0700 vzctl : CT 112 : Container is unmounted
```

The container's OS is CentOS 5 32bit w/ cPanel. If it is reformatted, it boots up without issue. What is the issue here? The logs are not showing anything.

Hi,

can you start the ct with --verbose option:

```
% vzctl --verbose start 112
```

Bye,
Thorsten

same problem here,

vzctl version 4.0-4.git.162dded

Linux nod11 2.6.32-18-pve

```
~ # vzctl --verbose start 119
```

root@nod11

```
Starting container ...  
Container is mounted  
Adding IP address(es): 193.47.79.78 193.47.79.208  
Running container script: /etc/vz/dists/scripts/redhat-add_ip.sh  
Setting CPU units: 1000  
Setting CPUs: 1  
Running container script: /etc/vz/dists/scripts/redhat-set_hostname.sh  
Running container script: /etc/vz/dists/scripts/set_dns.sh  
Running container script: /etc/vz/dists/scripts/set_ugid_quota.sh  
Container start in progress...
```

what can this be ?
No errors to be found anywhere

Try set greater verbosity of output with:

```
vzctl --verbose --verbose --verbose start 7777
```

If you use kernel RHEL6 042stab048.1 and up and vzctl utility 3.0.31 and up, you can try use container console to show, what container OS is doing during boot process.

On one terminal attach console to container

```
vzctl console 7777
```

And in other terminal run this container

```
vzctl start 7777
```

Have you some container, which started successfully on this HN?

Where did you get container template, which you try to start? It may be misconfigured or corrupt in any way.
