I'm using ProxMox VE with OpenVZ containers.

versions are:

KT0016:~# uname -a
Linux KT0016 2.6.32-5-pve #1 SMP Wed Jul 6 07:08:47 CEST 2011 x86_64 GNU/Linux

KT0016:~# pveversion -v
pve-manager: 1.8-18 (pve-manager/1.8/6070)
running kernel: 2.6.32-5-pve
proxmox-ve-2.6.32: 1.8-35
pve-kernel-2.6.32-4-pve: 2.6.32-33
pve-kernel-2.6.32-5-pve: 2.6.32-35
qemu-server: 1.1-30
pve-firmware: 1.0-12
libpve-storage-perl: 1.0-17
vncterm: 0.9-2
vzctl: 3.0.28-1pve1
vzdump: 1.2-14
vzprocps: 2.0.11-2
vzquota: 3.0.11-1
pve-qemu-kvm: 0.14.1-1
ksm-control-daemon: 1.0-6
KT0016:~#

ProxMox VE is built with OpenVZ patches, everything works well, but once a week containers
become unaccessible after vzdump backup. error messages are:

Jul 10 04:35:27 KT0016 kernel: lost page write due to I/O error on dm-3
Jul 10 04:35:27 KT0016 kernel: lost page write due to I/O error on dm-3
Jul 10 04:35:27 KT0016 kernel: lost page write due to I/O error on dm-3
Jul 10 04:35:27 KT0016 kernel: lost page write due to I/O error on dm-3
Jul 10 04:35:27 KT0016 kernel: lost page write due to I/O error on dm-3
Jul 10 04:35:27 KT0016 kernel: lost page write due to I/O error on dm-3

there are some other messages like ext3 problems, lvm problems, etc

is it normal thing about OpenVZ? or maybe it is known bug and ProxMox is just using wrong(old)
OpenVZ patchset ?

Hi,

what kind of device is used for your lvm, a single disk or raid,
have you test the drives as well ... any errors like smart raid logs etc ?

Bye,
 Thorsten

we seemed pick up unstable kernel. we'll try with 2.6.18 soon.
