Hi all

I have a container with Ubuntu 11.04

Not starting NFS kernel daemon: no support in current kernel (Linux 2.6.32-4-pve)

I have load the module nfs in host and adding this to container:

```
# vzctl set 101 --features "nfs:on" --save  
# vzctl start 101
```

But when I try to restart nfs-server i get:

```
/etc$ sudo /etc/init.d/nfs-kernel-server restart  
* Stopping NFS kernel daemon  
  [ OK ]  
* Unexporting directories for NFS kernel daemon...  
  [ OK ]  
* Not starting NFS kernel daemon: no support in current kernel.
```

What is the problem??

Thanks

did you load nfs kernel module on HN ?

also, please read this first: <http://wiki.openvz.org/NFS>

Yes, in the HN

pve:~# lsmod | grep nfs

```
nfs          241322 0
lockd        58748 1 nfs
fscache      29178 1 nfs
nfs_acl      2031  1 nfs
auth_rpcgss  33300 1 nfs
sunrpc       164133 5 nfs,lockd,nfs_acl,auth_rpcgss
```

and the container:

```
pve:~# vzctl exec 104 cat /proc/filesystems
ext3
nodev rpc_pipefs
nodev nfs
nodev sysfs
nodev proc
nodev tmpfs
nodev devpts
```

Any idea of what is happening?

Thanks
