Hey there,
because of Backup-Speed we do Ploop Level Backups of our Containers (as described here: https://openvz.org/Ploop/Backup)
But what would be the right procedure to restore such Backups when needed? (we got the "root.hdd" Directory + ve.conf)
Maybe someone here can help me on that? ;)
thx
Andreas Schnederle-Wagner

Anyone?
I would be interested in the reply as well.
