catch error while creating VPS:
#vzctl --verbose create 1 --ostemplate ubuntu-6.06-i386-minimal --private /mnt/mail_vps/

"Private area already exists"

but there is no such VPS:
#vzlist
VE not found

and directory is empty

nothing in /vz/private and /vz/root directory

if change "--private" parameter -then all created ok,

where is only one diferent with other dirs- it's mounted lvm volume (writeble)

vps can be created anythere exclude this directory :(

why?
