Hi everybody,

My question is about is necessary install a firewall in each VE, or only installing into the Hardware Node is enough to keep secure the VEs .

Is because im using 10 vps and in a few of them i need to stop the iptables to send mails, or the ICMP to the vps inst very good from a lot of connections, and installing a firewall can make worse the situation.

That's all, any expierence will be helpfully
