Subject: *SOLVED* WARNING: Function proxy_arp

Hi,

i installed OpenVZ according to the Debian Etch Howto in the wiki. Everything works fine even though the feeling is some kind different from linux-vservers the features are more promising.

But when i start/stop/restart a vz i get the following warning:

vps-net_add WARNING: Function proxy_arp for eth0 is set to 0. Enable with 'sysctl -w net.ipv4.conf.eth0.proxy_arp=1'. See /usr/share/doc/vzctl/README.Debian.

The howto in the wiki says i should set the proxy_arp to 0 for default in the sysctl.conf. But the warning message says otherwise.
The funny thing is it doesnt matter if i set the proxy arp to 0 or 1 in the conf-file, networking within the vz is with both options possible.

Now i m not sure wether its a bug or if i just didnt get it right

Regards
moby007
