Hello,

Please, read article http://wiki.openvz.org/Kernel_build, it is about how to build kernel. Also there is a description how to add your patches.

Thanks to this patch `simfs` returns as free blocks, available blocks and amount of blocks values `_directly_` from quota. It means that if you set quota limit to 50gb, `df` will always show 50gb.

To unroll this patch you should just boot in unpatched kernel.

HTH,
Vasily
