After download <http://www.kernel.org/pub/linux/kernel/v2.6/linux-2.6.18.tar.bz2> kernel, patch this <http://download.openvz.org/kernel/devel/028test010.1/patches/patch-ovz028test010.1-combined.gz> and <http://www.spinics.net/lists/sparclinux/msg00681.html>,

make-kpkg, install header and image, reboot,

woo, no kernel panic, great.
but it showed mount error:

mount: mounting /dev/sda1 on /root failed : no such device

.....

all FSs failed to be mounted.

I am going to re-do the whole process and pay attention of the FS configure setup. Do you have any suggestions on this issue?

Thanks

Sam
