1.

arp send: 68.128.52.229 is detected on another computer : 00:0c:30:c1:87:ff  
vps-net\_add WARNING: arp send -c 1 -w 1 -D -e 68.128.52.229 eth0 FAILED

these messages are warning only. if you are 100% sure that this IP address is not in use - it is safe to forget about it.

Does your VE work fine after it's booted?

2. If you claim that 00:0c:30:c1:87:ff is the MAC of the gateway, then it can be Strato GW which is configured somehow to cache MAC/IP and reply himself on arp requests.

Ask your provider about this.
