We are using server with 4 GB ram but it shows only 3 GB.
The operating system is CentOS 4.4
Which kernel do we have to install to see 4 GB RAM
#uname -a
Linux 2.6.9-023stab040.1-smp #1 SMP Tue Jan 16 00:54:22 MSK 2007 i686 i686 i386 GNU/Linux

We tried installing the openvz but we got following error.

WARNING: No module ata_piix found for kernel 2.6.9-023stab040.1-smp,
continuing anyway
WARNING: No module raid1 found for kernel 2.6.9-023stab040.1-smp, continuing
anyway

Can anyone suggest which kernel we use to see 4 GB RAM and how to rectify these warning.

Thanks
