Hello @all,

I'm tried to work with XEN3 and SuSE but I've the problem with compiling my own kernel (SMP, 64GB). So I've read the artikel about openvz and think it's better for me because I only need linux VPS on i386 machines.

Is it possible to patch a running SuSE Box with openvz? And how to setup a SuSE VPS on this host, are there any good HowTos for this? German is prefered.

Thanks a lot
Daniel
