Subject: *CLOSED* Application templates.

Hi,

I'm fairly new to this openvz stuff but have some experience with my work of using virtuozzo. I've just installed openvz on a test server and got some VE's up and running, great.

Now my attention turns to application templates, it keeps mentioning these in the documentation.... but I'm lost as how to create them, install them etc...the set of utilities available in openvz are very limited compared to virtuozzo (as you'd expect)...but I was hoping to be able to manage application templates?

Can I create and install application templates...or are they only available in virtuozzo?

Thanks,

Matt
