Subject: Lots of build errors in 028stab23

Hi folks,

I'm currently trying latest 028stab023 (just grabbed it from
the web today) and get lots of build errors. Seems like each
combination of options brings other errors ;-o
At least building an patched kernel w/o openvz at all is
currently impossible ...

Here's a little start:

include/linux/vsched.h:25: error: syntax error before "int"

This might come from the #define in sched.h, when CONFIG_SCHED_VCPU
is not enabled, which aliases vcpu_online(cpu) to cpu_online(cpu).

Maybe should just leave off "(cpu)" ?

... I'll have a try ...

cu
